CINNABAR
INVESTMENT MANAGEMENT

MDD Issue Date: 21/12/2023

Fund Objective

The objective of the portfolio is to provide investors with low volatility moderate long term capital growth.

Fund Strategy

Investments to be included in the portfolio will, apart from assets in liquid form, consist solely of participatory interests in portfolios of collective investment schemes registered in the Republic of South Africa. The portfolio will consist of a mix of collective investment scheme portfolios investing in equity, bonds and property and money market instruments. The portfolio's net equity exposure will range between 0% and 60% of the portfolio's net asset value. The Fund is Regulation 28 compliant. The portfolio will also be allowed to invest in listed and unlisted financial instruments (derivatives) as allowed by the Act from time to time. The Manager shall be permitted to invest on behalf of the portfolio in offshore investments as legislation permits.

Manager Annual Fee	1.15
Total Expense Ratio	1.80
Transaction Cost	0.12
Total Investment Charges	1.92
Performance Fee	—
TER Measurement Period	01 October 2020 - 30 September 2023

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

The historic total TER above is calculated based on 3 years of historic data, and includes Performance Fees until 30 June 2020. No performance fees have been charged since 1 July 2020 so the historic total TER will fall into line with the current effective TER as the historic data is removed from the calculation over time.

CINNABAR
INVESTMENT MANAGEMENT

Risk Profile

Moderate

You want to protect yourself from the ups and downs as much as possible and, in so doing, have as smooth a ride as is possible. But you know you need to take some risk to grow your capital. You have a medium to long-term investment horizon; you are looking for a diversified portfolio (ie, a portfolio that invests in a number of different asset classes to spread your risk), and one that offers real (after inflation) returns but with lower volatility. This fund would appeal to anyone nearing retirement (in the capital accumulation phase) and as well as after retirement (in the de-accumulation or capital preservation phase).

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Fund Strategy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Collective Investment Schemes

Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust investments.

Market Capitalization

Market capitalization is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the share price by the number of shares in issue.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

The standard deviation is a widely used risk measure of the return dispersion relative to the mean. It is also referred to as volatility.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. *A fund of funds portfolio is a portfolio that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds.* The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Cinnabar Investment Management (Pty) Ltd, (FSP) Licence No. 45402, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Cinnabar Market Update: November 2023

SA Market Drivers

South African (SA) markets rallied along with global markets; however local asset classes underperformed their global counterparts. The best performing asset classes came from global property and global equity followed by local property. Although local bond yields rallied strongly in the month, it was not sufficient to beat the unhedged global bond market. This was due to the rand broadly weakening against developed market currencies except for the US dollar where it remained flat. As the environment favoured riskier assets, local cash was the worst performing asset class.

Lower revenues and higher expenditures are adding pressure to an already strained government debt profile. As government seeks to find ways to plug the hole, numerous market participants have recommended using the gains made on the central banks foreign reserve account, mainly attributable to a weakening rand. Currently the reserve account is just shy of 10% of GDP. However, the intricacies of this seem daunting particularly if one considers the independence of the central bank. It is a possible solution, but it comes at a cost.

The logistics crisis compounded over the month as it was reported that over 100 vessels and 100,000 containers were stuck outside of South African ports with Durban and Port Elizabeth now among the top seven most congested ports in the world. This has direct impacts on numerous businesses which raises risks to jobs and higher prices, both of which the consumer can ill afford.

SA inflation rose to 5.9% in October from 5.4% in September notching up its 3rd consecutive increase. However, core inflation decreased to 4.4%, suggesting that the underlying level of inflation remains relatively under control. After receiving this data, the SARB MPC decided to maintain rates on hold at 8.25% but remain on high alert to the risk of rising inflation.

Global Market Drivers

November saw a big rally in markets due to positive news around falling inflation and interest rate expectations. Three of the major developed economic areas (UK, US and euro area) all saw their inflation fall more than expected, effectively closing off the chance of further rate rises and potentially paving the way for those central banks to cut rates towards the middle of next year. Needless to say, lower rates also mean less chance of a recession. Markets are now pricing in rate cuts of 1-1.5% in the next 12 months in the UK, US and euro area. This provided a boost to asset prices with bond yields falling, and thus bond prices rising, in anticipation of lower interest rates; and equities buoyed by an uplift in sentiment.

Inflation data out of US and Europe surprised to the downside with the UK, US and euro area all releasing inflation data below expectations. In the UK, headline CPI fell to 4.6% in October, from 6.7% the prior month and below expectations of 4.8%. US headline inflation fell to 3.2%, from 3.7% in September and below the expected 3.3%. Core inflation fell to 4% from 4.1% the prior month, also below expectations. The euro area headline inflation fell to 2.4% in November (expected to be 2.7%), from 2.9% in October; and core inflation dropped to 3.6% in November (expected at 3.9%), from 4.2% in October. This was a great relief to markets and households alike.

On the back of cooling inflation central bankers kept interest rates steady over the month. Markets began pricing in interest rate cuts from mid-way through next year. Central bankers maintained a relatively hawkish tone on inflation in an attempt to not let markets run ahead of themselves. UK, US and euro rates were held steady at 5.25%, 5.25-5.5% and 4.5% respectively.

From an economic perspective, 336,000 new jobs were created in the US in September, almost twice as many as expected. And this was shortly followed by the 2nd estimate for Q3 GDP showing annualised growth of 5.2%, above the 1st reading (4.9%) and above expectations (5%). This strong growth was somewhat at odds with what has been seen in the PMI data, composite PMI was unchanged for November at 50.7 with a small dip in manufacturing offset by a small rise in services.

Developed equities continued its dominance over emerging market equities. In developed markets, Pacific ex-Japan equities were the weakest performing equity region, closely followed by UK equities, although both were still solidly positive. Europe ex-UK equities were the best performing equity region. Within emerging markets, Asia underperformed materially mainly driven by poor performance out of China.

Bonds rallied strongly in November as future interest rate expectations fell, driven by lower-than-expected inflation. Emerging market debt rebounded sharply after a weak October and even Government bonds (a perpetual underperformer since 2020), rallied strongly during the month.

Property had a very strong month and was the best performing real asset class, whilst commodities suffered, mainly driven by lower energy prices which were the result of lower natural gas demand and higher oil supply. Listed infrastructure also had a good month benefitting from lower rates.
