

Cinnabar Sanlam Collective Investments Income Fund of Funds

CINNABAR
INVESTMENT MANAGEMENT

Minimum Disclosure Document

As of 30/04/2024

MDD Issue Date: 16/05/2024

Fund Objective

The objective of the portfolio is to provide investors with a high level of income combined with capital preservation.

Fund Strategy

Investments to be included in the portfolio will, apart from assets in liquid form, consist solely of participatory interests in portfolios of collective investment schemes registered in the Republic of South Africa. The portfolio will consist of a mix of collective investment scheme portfolios investing in equity, fixed interest instruments (including, but not limited to, bonds, corporate bonds, inflation linked bonds, convertible bonds, cash deposits and money market instruments), debentures, preference shares and property securities as well as any other income enhancing securities which are consistent with the portfolio's primary objective and that the Act may allow from time to time. The portfolio's equity exposure will be limited to a maximum of 10% of the portfolio's net asset value. The Fund is Regulation 28 compliant. The portfolio will also be allowed to invest in listed and unlisted financial instruments (derivatives) as allowed by the Act from time to time. The Manager shall be permitted to invest on behalf of the portfolio in offshore investments as legislation permits.

Total Expense Ratio	1.32
Transaction Cost	0.01
Total Investment Charges	1.33
Performance Fee	—
TER Measurement Period	01 January 2021 - 31 December 2023

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

The historic total TER above is calculated based on 3 years of historic data, and includes Performance Fees until 31 July 2019. No performance fees have been charged since 1 August 2019 so the historic total TER will fall into line with the current effective TER as the historic data is removed from the calculation over time.

*The Cinnabar Sanlam Collective Investments Income Fund of Funds transitioned to Sanlam Collective Investments (RF) (Pty) Ltd on 02 December 2017.

Risk Profile

Cautious

You are cautious about taking on risk (i.e. have a limited exposure to equities in your portfolio). You want your capital to be safe and prefer fairly stable income and/or income growth. Even knowing that equities are a riskier asset class, you are comfortable to have some exposure, albeit limited, to them because you know they will add that little extra to your portfolio.

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Fund Strategy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Collective Investment Schemes

Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust investments.

Market Capitalization

Market capitalization is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the share price by the number of shares in issue.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

The standard deviation is a widely used risk measure of the return dispersion relative to the mean. It is also referred to as volatility.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. *A fund of funds portfolio is a portfolio that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds.* Income funds derive their income primarily from interest-bearing instruments. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Cinnabar Investment Management (Pty) Ltd, (FSP) Licence No. 45402, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Comment

Cinnabar Market Update: April 2024

SA Market Drivers

South African (SA) equity meaningfully outperformed global equity and was the best performing asset class for SA investors, driven by a substantial bounce in the resources sector. Global asset classes, in general, experienced a currency headwind as the rand found some support and strengthened over the month. Local bonds followed the path of the rand and had a strong month after a lacklustre start to the year. Local property softened slightly whilst global property underperformed all other asset classes.

Headline consumer prices in South Africa slowed for the first time in two months to 5.3% year on year in March, below market expectations of 5.4%. Core inflation was also slightly lower, offering some breathing room to the SARB and investors following stickier data earlier in the year. Kganyago, however, reiterated that a sustained downward inflation trend towards the midpoint target is needed before rate cuts can take place.

April was the first month since 2022 to be free of loadshedding. Eskom has seen improved performance from their plants, as they achieved an energy availability factor (EAF) of 65%, last seen in 2021. The benefits to the economy are already evident as the manufacturing sector showed signs of a strong recovery in April, with the Purchasing Managers' Index (PMI) rebounding to 54.0, up from 49.2 a month ago, indicating an expansion.

April was the first month since 2022 to be free of loadshedding. Eskom has seen improved performance from their plants, as they achieved an energy availability factor (EAF) of 65%, last seen in 2021. The benefits to the economy are already evident as the manufacturing sector showed signs of a strong recovery in April, with the Purchasing Managers' Index (PMI) rebounding to 54.0, up from 49.2 a month ago, indicating an expansion.

Global Market Drivers

March saw the end of the last standing negative interest rate, with Japan's central bank raising its policy rate into positive territory. Globally, equity markets continued trending upwards in the face of broadly neutral economic news, as market participants continued to discount the chance of a recession, which also contributed to solid, if unspectacular, fixed income returns. Global inflation continued to fall or hold at current levels, largely in-line with expectations; and business sentiment generally rose. Risks do, however, remain and central banks have been wary of cutting interest rates too soon. The UK, US and Euro Area all maintained current interest rates during the month.

The Fed has kept the Federal Funds Target Interest Rate unchanged at 5.25%-5.50% for the sixth consecutive time. Powell's commentary, however, was less hawkish than expected, especially given the upside surprises to the recent inflation data. While Powell acknowledged the disappointing inflation data, he indicated that "it is unlikely that our next move will be a hike". This provided some relief to investors who were beginning to worry that a rate hike was becoming a likely option.

Data showed that inflation remained even more sticky in the US. Headline inflation rose to 3.5% in March, up from 3.2% the prior month and above the 3.4% expected. Core inflation remained at 3.8% in March, but was expected to dip a little. Most disappointingly, the Federal Reserve's preferred inflation measure (Core PCE – which has a lower weight to housing costs) remained at 2.8%, but had been expected to fall to 2.6%.

The US labour market showed signs of slowing as job openings fell from 8.8 million in February 2024 to 8.5 million in March 2024. This was below market expectations for a decline to 8.6 million. The US economy added 175 000 jobs in April, below the consensus estimate of 240 000 jobs and the smallest gain in six months. The unemployment rate increased slightly to 3.9% from 3.8% in March, while wage growth eased to below 4% y/y for the first time since mid-2021.

Emerging Markets outperformed developed markets with Emerging Europe the strongest performing equity region, more than recovering its losses from last month, whilst Latin America was the weakest EM region. Japan performed the worst in DM after what had been a very strong start to the year for the region. UK equities were the only developed market to offer positive returns for the month.

Bond performance across the board was negative, driven by sticky inflation data coming out of the US and expectations of rates being higher for longer being priced in. High yield and emerging markets delivered better returns with high yield bonds the best performing asset class, and the only asset class to deliver positive performance for the year. Government bonds were the worst performing fixed income asset class during April.

Global Property had a very difficult month and was the worst performing real asset class, whilst Commodities had a strong month through higher energy and record gold prices, delivering positive returns for the month.
