

Cinnabar Sanlam Collective Investments Income Fund of Funds

Minimum Disclosure Document

As of 31/12/2024

CINNABAR
INVESTMENT MANAGEMENT

MDD Issue Date: 16/01/2025

Fund Objective

The objective of the portfolio is to provide investors with a high level of income combined with capital preservation.

Fund Strategy

Investments to be included in the portfolio will, apart from assets in liquid form, consist solely of participatory interests in portfolios of collective investment schemes registered in the Republic of South Africa. The portfolio will consist of a mix of collective investment scheme portfolios investing in equity, fixed interest instruments (including, but not limited to, bonds, corporate bonds, inflation linked bonds, convertible bonds, cash deposits and money market instruments), debentures, preference shares and property securities as well as any other income enhancing securities which are consistent with the portfolio's primary objective and that the Act may allow from time to time. The portfolio's equity exposure will be limited to a maximum of 10% of the portfolio's net asset value. The Fund is Regulation 28 compliant. The portfolio will also be allowed to invest in listed and unlisted financial instruments (derivatives) as allowed by the Act from time to time. The Manager shall be permitted to invest on behalf of the portfolio in offshore investments as legislation permits.

Fund Information

Ticker	GCIFA
Portfolio Manager	Cinnabar Investment Management Team
ASISA Fund Classification	South African - Multi Asset - Income
Risk Profile	Cautious
Benchmark	110% of STeFI Call Rate
Fund Size	R 105,698,562
Portfolio Launch Date*	29/07/2014
Fee Class Launch Date*	29/07/2014
Minimum Lump Sum Investment	R 10,000
Minimum Monthly Investment	R 500
Income Declaration Date	March, June, September & December
Income Payment Date	1st business day of April, July, October & January

Maximum Annual Advice Fee	1.15
Manager Annual Fee	0.63
Total Expense Ratio	1.28
Transaction Cost	0.01
Total Investment Charges	1.29
Performance Fee	—
TER Measurement Period	01 October 2021 - 30 September 2024

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

The historic total TER above is calculated based on 3 years of historic data, and includes Performance Fees until 31 July 2019. No performance fees have been charged since 1 August 2019 so the historic total TER will fall into line with the current effective TER as the historic data is removed from the calculation over time.

Effective 1 December 2024, SCI will charge a monthly administration fee of R23 (VAT Inclusive) on retail investors whose total investment value is less than R50 000. Clients with an active recurring monthly debit order will not be levied this fee.

INVESTMENT MANAGEMENT

Risk Profile

Cautious

You prefer a low-risk profile with limited equity exposure for capital preservation and consistent income growth. You want your capital to be safe and prefer fairly stable income and/or income growth. Even knowing that equities are a riskier asset class, you are comfortable to have some exposure, albeit limited, to them because you know they will add that little extra to your portfolio.

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Fund Strategy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Collective Investment Schemes

Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust investments.

Market Capitalization

Market capitalization is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the share price by the number of shares in issue.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

The standard deviation is a widely used risk measure of the return dispersion relative to the mean. It is also referred to as volatility.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. *A fund of funds portfolio is a portfolio that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds.* Income funds derive their income primarily from interestbearing instruments. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Cinnabar Investment Management (Pty) Ltd, (FSP) Licence No. 45402, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Comment

Cinnabar Market Update: December 2024

SA Market Drivers

South Africa's annual inflation rate was 2.9% in November 2024, reflecting stabilisation in price pressures. The unemployment rate remained elevated at 32.9%, consistent with expectations. Retail sales grew modestly by 1.6% month-on-month in October, underpinned by improved discretionary spending. Business confidence rose to a six-year high of 118.1, reflecting optimism in key sectors.

South African equities underperformed, with the JSE All Share Index declining by 0.3% in December, weighed down by a 5.4% drop in the Resources sector. Industrials performed well, supported by gains in MTN (+13.9%) and Richemont (+11.5%). Bonds faced headwinds as the All-Bond Index returned -0.3% due to rising yields. Listed property, however, delivered a 0.4% gain for the month, ending the year with a strong 29.0% return.

The rand depreciated against the U.S. dollar amid global risk aversion. Policymakers focused on maintaining fiscal discipline, while international investors closely monitored economic recovery efforts.

Global Market Drivers

The U.S. economy expanded at an annualised rate of 3.1% in Q3, bolstered by consumer and government spending. Inflation rose to 2.7% year-on-year in November, with core Personal Consumption Expenditures (PCE) inflation registering 2.8%. Unemployment edged higher to 4.1% in November, reflecting softer labour market conditions. The Federal Reserve cut interest rates by 25 basis points in December, bringing the benchmark rate to 4.25%-4.50%, but signalled caution on further easing in 2025. U.S. equities declined in December, with the S&P 500 falling 2.4%. Earlier gains in technology stocks were reversed as investor sentiment cooled. The bond market also faced pressure, with yields rising across maturities. Commodities showed mixed performance, with gold outperforming due to safe-haven demand, while oil prices stabilised below \$85 per barrel. Donald Trump's re-election fuelled early optimism, but uncertainties around potential trade tariffs and fiscal policy initiatives weighed on markets toward the end of the month.

The UK economy shrank by 0.1% in both October and November, reflecting persistent weakness in manufacturing and construction. Inflation climbed to 2.6% in November, driven by energy costs. The Bank of England held interest rates steady at 4.75%, emphasizing the need for caution amidst elevated price pressures. UK equities fell, with sectors like real estate and utilities suffering due to rising bond yields. Financials provided a rare bright spot, supported by expectations of regulatory easing. Gilt yields increased further, reflecting fiscal policy concerns, while the pound depreciated against the dollar amid investor anxiety. The Autumn Budget introduced tax hikes and employer cost increases, dampening business sentiment and contributing to rising insolvencies. Labour market conditions continued to soften, with falling vacancy rates.

Eurozone GDP growth was 0.4% quarter-on-quarter in Q3. Inflation stood at 2.3% in November, while the composite PMI rose to 49.5 in December, signalling persistent contraction in manufacturing but modest growth in services. The annual inflation rate in the Euro Area accelerated for a third straight month to 2.4% in December, the highest rate since July. European equities ended December lower, led by declines in materials, real estate, and consumer staples. Industrials showed resilience, supported by improved business sentiment. Bonds faced rising yields, though European Central Bank rate cuts provided some relief. Political instability in France and Germany, combined with trade uncertainty, weighed on markets. ECB President Christine Lagarde reaffirmed the central bank's commitment to further rate cuts in 2025 to support growth.

China's inflation rate slowed to 0.1% in December, underscoring deflationary pressures. Industrial production grew by 5.4% year-on-year in November, while retail sales rose 3% over the same period. Policymakers announced additional stimulus measures, including liquidity injections and adjustments to mortgage terms, to bolster domestic demand. Chinese equities underperformed as weak consumer confidence and trade concerns dampened sentiment. Commodities, particularly industrial metals, continued to face price pressures. The yuan stabilised following central bank interventions to support the currency. Renewed trade tensions with the U.S. and uncertainty surrounding stimulus implementation posed challenges. Authorities emphasized policy measures aimed at stabilising growth and supporting the property sector.

Japan's economy grew by 0.3% quarter-on-quarter in Q3, driven by strong exports and capital investment. Inflation rose to 2.9% in November, marking the highest level in over a year. Retail sales increased by 2.8% year-on-year, reflecting improved consumption trends. Japanese equities gained in December, with the TOPIX Total Return Index rising 5.4%. Export-oriented sectors benefited from yen depreciation, while financials outperformed on expectations of potential Bank of Japan policy adjustments. The Bank of Japan maintained its ultra-loose monetary policy, opting for stability amid global uncertainties. Corporate governance reforms continued to progress, enhancing investor confidence ahead of 2025.
