CINNABAR
INVESTMENT MANAGEMENT

MDD Issue Date: 18/11/2025

Fund Objective

The primary investment objective of the fund is to achieve enhanced growth of capital over the longer term at the risk of moderate short-term volatility of capital values.

Fund Strategy

The fund will apart from assets in liquid form invest in participatory interest (units) of the Cinnabar Global Balanced Fund of Funds established under the Offshore Mutual Fund PCC Limited approved by the Guernsey Financial Services Commission in 20 May 2010. The Cinnabar Global Balanced Fund of Funds is a flexible fund designed to maximise returns. It will ideally be well diversified across asset classes, countries and regions. The asset allocation will be varied in such a manner as is deemed appropriate and shall not be precluded from continually varying the exposure to equity securities, non-equity securities and money market portfolios and assets in liquid form to achieve the investment. The manager may utilise exchange rate swaps or any other instrument permissible for the exclusive purpose of hedging exchange rate risk.

Maximum Annual Advice Fee	1.15
Manager Annual Fee	0.29
Total Expense Ratio	0.42
Transaction Cost	0.01
Total Investment Charges	0.43
Performance Fee	—
TER Measurement Period	01 July 2022 - 30 June 2025

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

Effective 1 December 2024, SCI will charge a monthly administration fee of R23 (VAT Inclusive) on retail investors whose total investment value is less than R50 000. Clients with an active recurring monthly debit order will not be levied this fee.

***Please note that the legal registered name of Cinnabar SCI* Global Balanced Feeder Fund is Cinnabar Sanlam Collective Investments Global Balanced Feeder Fund. SCI is an abbreviation for Sanlam Collective Investments.**

****The main fund this feeder fund is investing in is a non-distributing fund, hence no income may be available for distribution.**

INVESTMENT MANAGEMENT

Risk Profile

Moderate Aggressive

Your primary aim is to achieve the required capital growth necessary to realise your long term goals and objectives. You are prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer-term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Investment Policy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Collective Investment Schemes

Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

Market Capitalization

Market capitalization is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the share price by the number of shares in issue.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Performance Fee

Performance fees are incentive fees earned by the manager for performance in excess of the benchmark.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for a feeder fund. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Cinnabar Investment Management (Pty) Ltd, (FSP) Licence No. 45402, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Comment

Cinnabar Market Update: October 2025

South African Drivers

The South African Reserve Bank's commitment to maintaining inflation near the bottom of its target range and its cautious approach to rate adjustments is a critical driver. With inflation expected to rise slightly due to electricity costs but remain contained over the medium term, SARB's stance supports a stable interest rate environment. This benefits fixed-income allocations by reducing volatility in bond yields and enhances the attractiveness of duration exposure. For multi-asset portfolios, a predictable rate path also underpins confidence in local currency assets and mitigates risk premiums.

South Africa's achievement of consecutive primary surpluses and progress on structural reforms (such as transmission grid expansion and freight recovery) strengthens fiscal credibility. These developments reduce sovereign risk, which is positive for government bonds and corporate debt. For equities, reform-driven improvements in infrastructure and energy reliability can unlock growth potential in industrial and financial sectors. Multi-asset investors benefit from improved risk-adjusted returns across both fixed income and equity sleeves.

The US Federal Reserve's rate cuts and a broadly easing global inflation backdrop have spurred renewed appetite for emerging market assets. South Africa, having exited the FATF grey list and offering attractive real yields, stands to gain from increased foreign inflows. This dynamic supports the rand and enhances performance in local bonds and equities, while also reducing funding costs for corporates. For multi-asset portfolios, global liquidity conditions create a tailwind for risk assets, improving diversification benefits and total return prospects.

Global Drivers

Global monetary policy is no longer synchronised: the US Federal Reserve has begun cutting rates to support growth, while the European Central Bank and Bank of England remain on hold. This divergence creates volatility across developed market bonds and currencies. For multi-asset portfolios, Fed easing supports risk assets and EM flows, while ECB's pause may limit upside for European equities (as driven by rates).

Broad-based disinflation, driven by falling energy and food prices, is reducing real funding costs globally. Mortgage rates in the US have dropped to a one-year low, boosting consumer confidence and housing activity. Lower inflation expectations support duration exposure and improve equity valuations, particularly in rate-sensitive sectors such as technology and real estate.

Heightened geopolitical uncertainty, driven by trade disputes, regional conflicts, and shifting alliances, has introduced volatility into global markets. However, many emerging markets have demonstrated resilience through stronger fiscal positions, structural reforms, and diversified trade relationships. This combination creates a mixed backdrop for multi-asset portfolios: while geopolitical risks can increase currency and commodity volatility, resilient EM economies attract capital flows and offer compelling yield opportunities.
